## Features

BDS Walk and Follow addon includes two independent modules: Walk&Follow (exterior module) and CockpitWalk (VC module).

### Walk&Follow module features:

- Follow mode: in this mode camera can be attached to the selected aircraft
- Walk mode: free camera movement mode.
- AI spotting: Follow mode can be set for AI traffic
- Camera movement speed/step setup: pace can be set between 0 and unlimited value
- 10 custom viewpoints for Walk mode
- 10 custom viewpoints for Follow mode
- Viewpoints are saved individually for each aircraft, i.e. every aircraft loads it's own viewpoints and camera settings (except AI traffic)
- Return to configurable default view with hotkey
- Three dimensions camera movement
- Bank left/right
- Two modes of mouse movement
- Zoom mode
- Info String
- Internal Help System

### CockpitWalk module features:

- 15 custom camera profiles for each VC
- Viewpoints are saved individually for each Virtual Cockpit, i.e. every aircraft loads it's own viewpoints and camera settings
- Three dimensions camera movement
- Bank left/right
- Two modes of mouse movement
- Editing viewpoints
- Hotkeys configuration
- Internal Help System

## **Walk&Follow Module Keyboard and Mouse Commands**

### **Modes**

/ - Follow mode

\* - Walk mode

### **Movement**

Arrow keys – Movement left, right, forward, backward

PgUp/PgDown – Movement up/down

Home/End – Look Up/Down

Ins/Del – Turn Right/Left

Shift+Ins/Del – Change the angle of view

### **Traffic**

Ctrl+Numpad +/- - Switching between traffic

### **Zoom**

Numpad +/- - Zoom In/Out

### **Speed**

Shift+Numpad +/-

Numpad 5 – Fast return to the starting position

### **Saving:**

Use Ctrl+Shift+1,2,3 ... 0 in Follow or Walk mode to save the current position. To load the position use Alt+Shift+1,2,3 ... 0

For example, press Ctrl+Shift+3 in Walk mode to save the current position into profile 3. You can recall it later by pressing Alt+Shift+3

### **Walk and Follow Menu**

Settings – configure parameters of camera profiles and the default preset that is loaded when you start the simulator.

Load – load camera profiles.

Save – save camera profiles.

All keyboard shortcuts can be modified by user.

### **Mouse Mode**

Hold Left Mouse Button – Change Camera View Mode.

Ctrl + Hold Left Mouse Button – Camera Movement Mode.

Mouse Wheel – Control Zoom

## CockpitWalk Module Keyboard and Mouse Commands

### Keyboard Shortcuts:

Ctrl+Shift+Backspace – Move left  
Ctrl+Shift+Enter – Move right  
Shift+Backspace – Move down  
Shift+Enter – Move Up  
Ctrl+Backspace – Move forward  
Ctrl+Enter – Move backward  
Shift+A – Turn left  
Shift+D – Turn right  
Shift+W – Look up  
Shift+S – Look down  
Shift+Q – Stoop left  
Shift+E – Stoop right  
Ctrl+Numpad Plus – Increase movement speed  
Ctrl+Numpad Minus – Decrease movement speed

### Mouse Mode

Ctrl-Shift-Space – Activate **Forced Mouse Mode**. In this mode camera is moved by mouse. The closer mouse pointer is to the end of the screen – the faster camera is moved.

- Left Mouse Button – Walk forward
- Right Mouse Button – Walk backward
- Ctrl/Shift – Increase/decrease walk speed

Hold Scroller/Middle mouse button – Activate **Temporary Mouse Mode**. While the scroller button is pressed move mouse to the end of screen to move the camera.

- Left Mouse Button – Walk forward
- Right Mouse Button – Walk backward
- Ctrl/Shift – Increase/decrease walk speed

Mouse Wheel – Control Zoom

## Addon Activation Procedure

After downloading and installation of addon, you must activate it in order to work properly. Addon activation is also required after reinstall of your operating system.

To activate the addon, please follow these steps:

- 1) Launch MSFS and choose any aircraft.
- 2) Click "Activation Request" located in DBS Studio -> CockpitWalk OR Walk And Follow menu. Only one activation is required. If you select to activate CockpitWalk module, there is no need to activate Walk And Follow module. It will be activated automatically.
- 3) Fill in all required fields. The name field must contain your First and Last name as you are registered at IGFLY server. Your E-Mail address must exactly match the one at IGFLY server.
- 4) If your computer is connected to internet and you have E-Mail client installed, click Send button to send the activation request to IGFLY. If your computer is not connected to internet, click Save button to save the request and then mail it manually to [activate@igfly.com](mailto:activate@igfly.com)
- 5) Please allow up to one business day to process your activation request.
- 6) When you receive the reply with activation code, copy the code to clipboard (Ctrl + C).
- 7) Launch MSFS and choose any aircraft. Click "Activate" located in DBS Studio -> CockpitWalk OR Walk And Follow menu. Then click Get from Clipboard button and press Activate button.
- 8) Restart the simulator. The activation is now complete.

If you experience any troubles activating the addon, please contact IGFLY support.
